

# PowerShell : Fonction

## FilePath

```
function This-IsYourFunction
{
    Param
    (
        [Parameter(Mandatory=$true)]
        [ValidateScript({Test-Path $_})]
        [string]
        $filePath
    )

    Write-Host "Hello, World."
}
```

```
function Install-Office {
    [CmdletBinding()]
    param(
        [Parameter(Mandatory, ValueFromPipelineByPropertyName)]
        [ValidateSet('2013', '2016')]
        [string]$Version,
        [Parameter(ValueFromPipelineByPropertyName)]
        [ValidateNotNullOrEmpty()]
        [string]$ComputerName
    )

    process {
        <#
        ## Connect to the remote with some code here
        Invoke-Command -ComputerName $ComputerName -ScriptBlock {
            ## Do stuff to install the version of office on this computer
            Start-Process -FilePath 'msiexec.exe' -ArgumentList
            'C:\Setup\Office{0}.msi' -f $using:Version
        }
        #>
        Write-Host "I am installing Office version [$Version] on computer
        [$ComputerName]"
    }
}
```
